

In the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

1. (Currently Amended) A method for providing an extensible macro language comprising:

analyzing a macro language expression;

determining based on a predetermined syntax of a macro language, one or more keywords in the analyzed macro language expression, the keyword representing an extended macro command, initially unknown to the macro language;

retrieving an executable code associated with the keyword from a registry of keywords, the registry of keywords being built dynamically to include the extended macro command; ~~and~~ executing the executable code[[,]] associated with the keyword; and

wherein the extended macro command is executed without recompiling the macro language.

2. (Previously Presented) The method for providing an extensible macro language as claimed in claim 1, further comprising:

extending the registry of keywords by inserting a new keyword representing a new macro command and a code associated with the new keyword.

3. (Currently Amended) A system for providing an extensible macro language, comprising:

a parser having a predefined syntax to determine one or more extended keywords embedded within a macro language expression, the extended keyword representing a newly extended command initially unknown to a macro language;

a ~~keyword-repository~~ registry of keywords having one or more keywords and one or more associated codes; ~~and~~

a macro handler coupled to the parser for receiving the extended keyword from the parser, the macro handler in response to the received extended keyword, retrieving a code of instructions associated with the received extended keyword from the ~~keyword-repository~~ registry of keywords, the ~~keyword-repository~~ registry of keywords being built dynamically to

include the extended command and executing the code of instructions to run the extended command represented by the extended keyword[[,]] ; and

wherein the extended macro command is executed without -recompiling the macro language.

4. (Currently Amended) The extensible macro language as claimed in claim 3, wherein the ~~keyword-repository~~ registry of keywords is augmented to include one or more new keywords and one or more associated codes.

5. (Currently Amended) A method for parsing a macro language expression, comprising:

analyzing a macro language expression;

determining based on a predetermined syntax of a macro language, one or more keywords in the analyzed macro language expression, the one or more keywords representing one or more new extended macro commands initially unknown to a macro language; and

searching a registry of keywords for a code of instructions to execute, the code of instructions associated with the one or more keywords[[,]] ; and

wherein the extended macro command is executed without recompiling the macro language.

6. (Previously Presented) The method for providing an extensible macro language as claimed in claim 1, wherein the code includes machine operable instructions.

7. (Currently Amended) A method for providing an extensible macro language comprising:

analyzing a macro language expression;

determining based on a predetermined syntax of a macro language, one or more keywords in the analyzed macro language expression, the keyword representing an extended macro command initially unknown to the macro language;

retrieving a code of instructions associated with the keyword from a registry of keywords; and

executing the code of instructions associated with the keyword[[,]] ; and
wherein the extended macro command is executed without recompiling the macro language.

8. (Currently Amended) A system for providing an extensible macro language, comprising:

a parser having a predefined syntax to determine one or more extended keywords embedded within a macro language expression, the extended keyword representing a newly extended command initially unknown to a macro language;

a ~~keyword repository~~ registry of keywords having one or more keywords and one or more associated codes; ~~and~~

a macro handler coupled to the parser for receiving the extended keyword from the parser, the macro handler in response to the received extended keyword, retrieving a code of instructions associated with the received extended keyword from the ~~keyword repository~~ registry of keywords and executing the code of instructions to run the extended command represented by the extended keyword[[,]] ; and

wherein the extended command is executed without recompiling the macro language.

9. (Currently Amended) A program storage device readable by a machine, tangibly embodying a program of instructions executable by the machine to perform method steps of extending a macro language, comprising:

analyzing a macro language expression;

determining based on a predetermined syntax of a macro language, one or more keywords in the analyzed macro language expression, the keyword representing an extended macro command initially unknown to the macro language;

retrieving a code of instructions associated with the keyword from a registry of-
keywords; ~~and~~

executing the code of instructions associated with the keyword[[,]] ; and

wherein the extended macro command is executed without recompiling the macro language.
